

# case study

For the past four years, Swiftclean has established a robust collaboration with a major NHS hospital trust in Kent, providing critical fire damper function testing and remedial services as part of a wider compliance partnership. Working in close collaboration with their managing agents, we have maintained our contract through a commitment to reliability, adaptability, and expert service delivery.

## A GROWING PARTNERSHIP

**Our relationship with the hospital began in 2020, initially providing kitchen extract fire safety cleaning services. The success of this early engagement led to the expansion of our remit to include fire damper function testing and necessary remedial work across the estate. From there, our role grew to encompass full ventilation system cleaning across the entire hospital, including high-risk and critical care environments such as the ICU, A&E, and Maternity wards.**

## LONG-TERM VALUE

Our longstanding partnership with the hospital trust reflects our ability to consistently deliver high standards and support long-term compliance strategies. From routine fire damper testing to more complex ventilation cleaning projects, we bring consistency, technical expertise, and peace of mind.

## NAVIGATING CHALLENGES WITH EXPERTISE

Working in a busy healthcare environment requires careful coordination and a sensitive, flexible approach. Our experienced teams understand the demands of working around vulnerable patients and staff, particularly in areas that must remain operational 24/7. Our collaborative efforts not only ensure compliance but also bolster the hospital's commitment to patient safety and well-being. By maintaining the functionality of fire dampers and ensuring clear ventilation pathways, we contribute to a safer environment for both patients and staff. We also provide ongoing advisory support to ensure the trust remains compliant with evolving regulations. As industry specialists, we proactively track and respond to legislative and regulatory changes, sharing our knowledge with the hospital's estates team and helping them stay ahead of compliance requirements.
